

# Madhav Ecommerce Sales Dashboard

## Project Overview

The **Madhav Ecommerce Sales Dashboard** was developed in **Power BI** to examine sales, profitability, customer purchasing patterns, and product performance across different regions. The report consolidates multiple business metrics into a single analytical view, allowing stakeholders to evaluate revenue trends, identify profitable products, and understand customer behavior across payment methods and states.

The dashboard focuses on answering business questions that support sales planning and profitability rather than simply displaying KPIs.

## Business Objectives

This project was created to analyze:

- Overall sales and profit performance
- Monthly profit fluctuations
- Revenue contribution by state
- Customer purchasing patterns
- Product category demand
- Preferred payment methods
- Highest profit-generating products

## Key Performance Indicators

| Metric              | Value |
|---------------------|-------|
| Total Sales         | 438K  |
| Total Profit        | 37K   |
| Total Quantity Sold | 5,615 |

Average Order Value      **121K**

These KPIs provide a quick overview of business performance for the selected filters.

## Dashboard Analysis

### Sales Distribution by State

The dashboard highlights the five states generating the highest sales revenue.

#### Findings

- Uttar Pradesh contributes the largest share of sales.
- Rajasthan and West Bengal follow as the next strongest markets.
- Tamil Nadu and Sikkim contribute comparatively lower revenue.

#### Business Value

Understanding regional performance helps prioritize marketing efforts and inventory allocation.

### Payment Mode Analysis

Customer transactions were analyzed across different payment methods.

Distribution includes:

- Cash on Delivery (COD)
- UPI
- Debit Card
- Credit Card
- EMI

#### Findings

Cash on Delivery accounts for the largest share of transactions, while digital payment methods collectively represent a significant portion of customer purchases.

#### Business Value

These insights help businesses optimize payment options and improve the checkout experience.

## Monthly Profit Trend

Monthly profit analysis reveals variations in profitability throughout the year.

### Findings

- January records one of the highest profits.
- Mid-year months show temporary losses.
- November delivers the strongest profit performance.
- December experiences another decline.

### Business Value

Seasonal trends can be used to plan promotional campaigns, pricing strategies, and inventory management.

## Customer Analysis

The dashboard identifies the highest-value customers based on purchase amount.

### Findings

A small number of customers contribute a significant portion of total revenue, highlighting the importance of customer retention.

### Business Value

High-value customers can be targeted through loyalty programs and personalized offers.

## Product Category Analysis

Products are grouped into:

- Clothing
- Electronics
- Furniture

### Findings

Clothing accounts for the largest share of product quantity sold, followed by Electronics and Furniture.

### Business Value

Understanding category demand helps optimize stock levels and product assortment.

## **Top Profit-Generating Products**

Products are ranked based on total profit generated.

Top-performing products include:

- Printers
- Bookcases
- Sarees
- Accessories
- Tables

## **Business Value**

High-margin products can receive greater marketing focus, while lower-performing products may require pricing or inventory adjustments.

## **Dashboard Filters**

The report includes slicers for:

- Quarter
- State

These filters enable users to analyze performance across different time periods and geographic regions.

## **Power BI Features Used**

The dashboard was developed using:

- Power BI Desktop
- Power Query
- Data Modeling
- DAX Measures
- Cards
- Bar Charts
- Doughnut Charts
- Clustered Column Charts
- Slicers
- Custom Theme & Formatting

## **Business Insights**

- Sales reached **438K**, generating **37K** in profit.
- Uttar Pradesh emerged as the highest-performing state.
- Cash on Delivery remained the preferred payment method.
- Clothing represented the largest product category by quantity sold.
- Printers generated the highest product-level profit.
- Monthly profit showed noticeable seasonal fluctuations, with November delivering the strongest performance.

## Conclusion

This Power BI dashboard provides a comprehensive view of ecommerce performance by combining financial metrics, customer behavior, product profitability, and regional sales analysis. The report enables decision-makers to identify profitable markets, evaluate payment preferences, monitor monthly trends, and prioritize products that contribute the most to business growth.
